Dear Shipper,

As you will be aware, the operator of the gas platform Tyra has announced a shutdown of Tyra for a multi-year redevelopment project ("the Period of the Tyra Redevelopment"). This means that during the Period of the Tyra Redevelopment, the flow through the Nybro entry point will come from the Syd Arne – Nybro pipeline.

Date:
Monday, 25 June 2018

Energinet has been informed by the market, that during the Period of the Tyra Redevelopment, as a consequence of above, entry Nybro shippers might face a challenge with the upper limit of 55.8 MJ/m³ on Wobbe index, cf. clause 1 a) of Appendix 1 to Rules for Gas Transport ("RfG"). Such gas is defined as not complying with the quality and delivery specifications, and according to clause 11.3 of RfG, Energinet can either agree or refuse to receive and transport such gas.

The market has asked under which conditions Energinet expects to be able to receive and transport such gas. We can hereby announce that Energinet expects to be able to receive and transport gas at Nybro entry point, which complies with the quality and delivery specifications except for upper limit on Wobbe index, subject to the following;

- Time limited to Period of the Tyra Redevelopment due to flow conditions;
- Wobbe index not higher than 56.5 MJ/m³; and
- Sufficient flow at Ellund entry point.

For sake of good order, note that according to clause 11.3 d) of RfG, if and when Energinet agrees to receive and transport gas not complying with the quality and delivery specifications, the shipper shall pay an off-spec fee to Energinet in accordance with clause 17.2 f) i). Also note that Energinet will ensure that the gas complies with the quality and delivery specifications when the gas exits the transmission system.

If you have any questions, please reach out to your Energinet front office contact.

Yours sincerely,

Energinet Gas TSO A/S
